David A. George

Senior Software Engineer | Product Engineering & UX

dav.a.george@gmail.com | (757) 284-6856
https://davidageorge.me

Product-minded software engineer with experience spanning user onboarding, conversion optimization, product design, and full-stack development since 2012. Combines user research and UX judgment with hands-on engineering to build intuitive products. Experienced in delivering AI-powered experiences, shaping technical direction, and leading teams from discovery through production.

Experience

Clarvos

Engineering Manager, Frontend & Full-Stack Tech Lead

January 2026 - November 2026 · Remote

- Built and launched Creative Studio, an AI-powered ad creation and editing product. Served as full-stack technical lead across frontend, backend, ML and agentic systems, and product design.
- Partnered with product and design to turn customer feedback into interface improvements that helped marketers revise ads for different messages and formats while keeping them recognizable as part of the same brand.
- Led a production migration that made it easier for engineers to own features across the frontend and backend.
- Led engineering implementation of two application-wide redesigns within 8 months. Made tech stack decisions for greater UI extensibility and to reduce BE/FE barriers working between Java and React. Primary implementer of the each migration, and introduced dark mode.
- Established earlier engineering-led technical discovery and moved epic decomposition to tech leads, reducing back-and-forth with product. Created AI-assisted workflows for turning ambiguous epics into engineering stories, implementation, code review, backlog management, and Jira progress reporting.
- Enabled individual engineers to deliver complex epics in days instead of weeks through changes to architecture and development workflows.
- Managed the frontend engineering team, conducting monthly one-on-ones and mentoring their transition to full-stack development. Coordinated progress across backend and ML contributors, participated in hiring, and reported on contractor contributions.
- Implemented CI/CD test-coverage reporting using Vitest and introduced PostHog feature flags to replace Terraform-controlled flags.

Senior Front-End Software Engineer

June 2025 - December 2025 · Remote

- Built interfaces integrating data science, ML/AI agents and services, and REST APIs in partnership with product and design.
- Led engineering implementation of an application-wide rebrand, using the shared component library, Material UI theming, and Storybook to define and apply typography, colors, and foundational design tokens.
- Established frontend AI-integration practices and living component documentation through Storybook.
- Mentored engineers, led frontend collaboration with product and design, and interviewed candidates for roles including Technical Product Manager.

Fringe, Inc.

Senior Front-End Engineer & Lead Product Design Engineer

November 2022 - May 2025 · Remote

- Rebuilt the marketplace homepage and vendor-discovery experience around interest-based recommendations and a streamlined purchase flow, reducing time to add a product to the cart by approximately 30%, measured in production analytics.
- Established UserTesting research and conducted guided interviews with power users. Used findings, A/B testing, and rapid prototype iteration to improve discovery and redesign the cart, increasing completed checkouts.
- Defined the MVP, designed the experience, and led UI development for Fringe's ADP Thrive Marketplace offering through launch and ongoing support, enabling purchases without requiring a separate Fringe account.
- Led frontend architecture and design-system standards for a Series A startup. Architected a shared component library that reduced development time by approximately 40% and established parity between Figma designs and Storybook components.
- Led JS-to-TS and Create React App (CRA)-to-Vite migrations, plus successive React upgrades from version 16 to 17 to 18.
- Implemented application theming for light, dark, and client-specific experiences and designed application-wide animations using Framer Motion.
- Led platform-wide accessibility and performance improvements, achieving WCAG 2.2 AA compliance, increasing Lighthouse scores by 35%, and reducing bundle size by 20%.
- Maintained 92% frontend unit-test coverage using Jest, React Testing Library, and Vitest; integrated Chromatic visual regression testing into CI/CD.
- Mentored engineers and led cross-functional collaboration between design and engineering.

CapCenter

Product Designer & Lead UI/UX Developer

October 2019 - November 2022 · Richmond, VA

- Led product design and frontend development across mortgage, lending, and real estate products, improving consistency, usability, engagement, and conversion across the digital ecosystem.
- Led the loan application redesign, owning product design and frontend implementation. This redesign was a major factor in growing loan volume 500% to $1.2B and grew NPS 2+ points.
- Led design and frontend development for a home-search product competing with established real estate discovery platforms.
- Designed and built financial tools and educational experiences to help customers understand their options.
- Led frontend development and UX/UI design for the website redesign, meeting WCAG 2.1 AA accessibility standards.

NBA Top Shot / Dapper Labs

Technical Consultant

September 2021 - December 2021 · Remote

- Served as a technical marketing consultant and marketing developer for NBA Top Shot, supporting short-term strategic initiatives for the digital collectibles platform.
- Implemented data normalization supporting personalized email campaigns for an audience of more than two million users.
- Supported platform onboarding through creative messaging campaigns, collectible drops, and A/B testing.

Dito

Lead UX Designer & UI Developer

January 2017 - October 2019 · Remote

- Led product design and UX discovery for a Premier Google Partner, owning the interface design process for internal and client applications.
- Worked directly with clients and stakeholders, including Northrop Grumman, to understand requirements and guide design decisions.
- Sketched, wireframed, prototyped, built, and deployed custom applications within the Google Cloud ecosystem using React, Angular, HTML, Sass.
- Led usability testing to uncover actionable feedback and missing product requirements.
- Served as lead designer and developer for Northrop Grumman's NEXT intranet and as a frontend engineer for KFC's store-locator application.
- Led UX design and UI development for San Joaquin County's Section 508-compliant foster-program Matching Engine.

Technical Marketing Lead & Google Maps Solutions Developer

March 2015 - January 2017 · Remote

- Led technical marketing development across Salesforce, Marketo, HubSpot, WordPress, and G Suite.
- Combined Google Maps API development and sales engineering responsibilities with a $1.2M annual sales quota.
- Consulted with customers and prospects on Google Maps APIs, translating business needs into technical solutions and supporting sales growth.
- Delivered technical demonstrations and presentations on Google Maps and G Suite at Google offices nationwide.

Koofers.com

Senior Client Strategy

2013 - 2014 · Blacksburg, VA

- Led business-development and client-retention strategy for a Series A college study platform through its 2014 acquisition.
- Managed sales-funnel and lead-conversion initiatives and developed client marketing strategies.
- Developed conversion-focused interfaces and landing pages.

Heyo

Head of New User Experience

2012 - 2013 · Blacksburg, VA

- Led the new-user experience as one of the company's first 10 employees, focusing on free-trial acquisition, onboarding, and trial-to-purchase conversion.
- Designed landing pages and forms informed by analysis of user behavior, purchase motivations, and product usage.
- Wireframed and prototyped digital products and created onboarding flows and UI screens.
- Conducted live usability testing to identify friction and inform improvements.

Skills

Product & Design: Product discovery, interaction design, usability testing, user interviews, A/B testing, product analytics, conversational interfaces, accessibility, data visualization, Figma, Sketch, Adobe XD, UserTesting

Frontend & UI: React, Next.js, Vue, Angular, Tailwind CSS v4, Material UI, shadcn/ui, DaisyUI, Styled Components, Bootstrap, Quasar, Framer Motion, Lottie, Storybook, design systems, theming, design tokens

Data, APIs & State: PostgreSQL, Drizzle ORM, tRPC, REST APIs, Firebase, Cloud Firestore, TanStack Query / React Query, React Router, Zustand, Recoil, React Context, Protocol Buffers, Capacitor

Leadership & AI Workflows: Engineering management, mentoring, architecture, technical discovery, epic decomposition, cross-functional delivery, AI-agent integration, AI-assisted development, custom agent skills, Jira

Testing & Delivery: Vitest, Jest, React Testing Library, Chromatic, Vite, Webpack, Git, GitHub CI/CD, Azure DevOps CI/CD, npm, Yarn, automated PR coverage reporting, PostHog feature flags

Cloud & Observability: Google Cloud Platform, Cloud Run, Vertex AI, Pub/Sub, App Engine, Grafana, Datadog, Azure DevOps and Portal

Languages & Web: TypeScript, JavaScript, Python, Java/Spring, Go, Google Apps Script, semantic HTML, CSS, Sass, Stylus, command-line tools

Education & Professional Development

Silicon Valley Product Group · Product Operating Model Masterclass

2024

Nielsen Norman Group (NN/g) · Omnichannel Journeys & Customer Experience with Interaction Design Specialty

2021

Edward Tufte · Analyzing and Presenting Data Visualizations

2019

Google · Associate Cloud Engineer

2018

Virginia Tech · B.S. Business & Marketing Management

2012

Awards

Innovative Technology Award, California · 2017
